

ARE H9 with rechargeable lithium-ion batteries

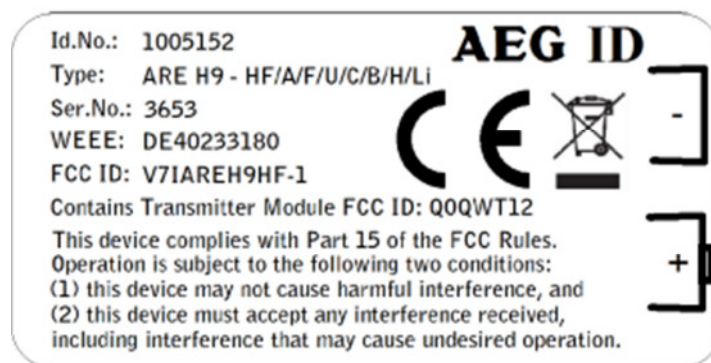

1 Installation of the rechargeable lithium-ion batteries

Slide door of the battery compartment to open it.

Attach the rechargeable batteries (ID-no. 1005048) as shown on the label inside the battery compartment.

You can just use rechargeable batteries with the following properties:

- Voltage 3,7V (don't use normal AA batteries)
- Protected lithium-ion batteries to prevent over charging or over discharging

The rechargeable batteries can only be charged with an external battery charger (ID-no. 1005049).

Slide the door back to close it.

2 Safety instructions for rechargeable li-ion batteries

2.1 Danger

Rechargeable li-ion batteries can explode or catch fire if used improperly. The ingredients of the li-ion batteries can be dangerous to health.

2.2 Proper use

To use the li-ion batteries safely please consider the following points:

- Do not expose to high temperatures, flames or acid fluids
- Do not short circuit
- Do not open, puncture or crush
- Remove rings, watches or objects with metal parts when you handle rechargeable li-ion batteries (high short-circuit current can cause severe burns)
- Keep dry
- Do not use defect, deformed, or bloated rechargeable li-ion batteries
- Only use approved battery charger
- Rechargeable li-ion batteries have a higher voltage than normal AA batteries. Use rechargeable li-ion batteries only in approved devices, unapproved devices can be damaged.
